

JOSH RESTIVO

DIRECTOR OF ARCHITECTURE

Josh's got talent!

Talent in a broad range of technical disciplines: computer forensics. AIOps, API Exposure Technologies, Cloud Computing ... and more.

Josh is a self-made geek.

At age 10 he started with a Commodore C64 and modem. From there he began a journey to learn all he could about computers, computer languages, networks, network architecture, software, APPs, Clouds and more. His knowledge turned into an amazing IT career in the dynamic world of technology startups to the imposing and mission-critical battlefields of AT&T.

Josh was "cyber-cool" before cybersecurity was cool.

Soon after 9/11, Josh co-founded the company, Access Forensics, a national information security and computer forensics firm that supported local, state and federal government computer security projects.

As a seasoned architect of comprehensive strategies for new technology adoption, Josh joined ZIRRUS One as Director of Architecture where he works directly with customers – staying ahead of the technology curve to find innovative solutions and services to meet their needs. When asked, Josh sees his role is to make the company and our customers successful and to do that...

Josh wears many hats.

Consultant. Leader. Architect. Programmer. APP Developer. Risk Mitigator. Analyst. Cheerleader and Champion.
